Response to Arguments

Applicant's arguments filed 4/6/06 have been fully considered but they are not persuasive. For the reasons of record the rejection of claim 10 is still valid and the incorporation of its limitations into independent claim 7 does not change its status as rejected.

Applicant's arguments filed 3/9/06 have been fully considered but they are not persuasive. The applicant has argued that in regard to claim 10 the method of Elam would require some inhibitor.

The examiner argues that Elam does not teach that an inhibitor is necessary it merely teaches that "The inhibitor may be included" (column 3 line 63) or that the maskant "should also contain an inhibitor" (column 3 line 47). This language open to the exclusion of an inhibitor and therefore would not be seen as a necessity in the formation of the maskant. Alternatively, Elam discloses that the maskant may include any amount of zirconium oxide these amounts would include an amount that would make the powder consist essentially of zirconium oxide (column 3 lines 38-45). It is noted that Elam discloses at column 3 line 47 that the maskant can include an inhibitor however, it would have been obvious to provide the zirconium oxide maskant without the inhibitor because it is well settled that omission of an element and its function is obvious if the function is not necessary see *Ex parte Wu*, 10 USPQ 2031 (Bd. Pat. App. & Inter. 1989).
